Introducing The Greenbank Group Inc.’s U.S. Businesses

For Coal Fired Power Plant
The Greenbank Group of Companies

The Greenbank Group, Inc.

C.B.P. Engineering Corp.
Greenbank Energy Solutions Inc.
C.B.P. Materials Handling Division
Brief History

C.B.P. Engineering Corp. was founded in 1970 as a spin off from our then English parent company, Greenbank Engineering, to cover the North American market place. **Greenbank started business in 1954** and serviced the European and other world markets.

Cast Basalt pipe or Basramite, was CBP's first product. Since the 1970's C.B.P. has evolved into a full service materials handling company offering not only a wide range of abrasion resistant products and conveying systems but also products for the effective management of operating, process and power plants.
Brief History

• In 1998 C.B.P.'s and Greenbank's management team purchased the company from the previous ownership group. After two strategic acquisitions to supplement the materials handling business and multiple long term partnership agreements it then added a research and development division within The Greenbank Group of companies. This R&D division in a joint venture with a leading United Kingdom University has developed several new innovative products that allow The Greenbank Group to offer its customers new cutting edge products to efficiently operate their plants into the 21st century and beyond. The Greenbank Group is truly Enhancing Performance with products that are sold through our group companies Greenbank Energy Solutions Inc., in the Americas and Greenbank Terotech Ltd.'s Systems Division in Europe, Asia, Africa, and Australia. The new product line features coal flow monitors, particle size analyzers, stack monitors, acoustic leak detectors and variable area rope breakers. These new and innovative products will save our customers billions of dollars through the efficient use of their resources.
CBP Engineering Corp.

- The abrasion resistant material handling business.
- Core business of The Greenbank Group Inc. in the Americas.
- Founded in 1970 with many of our first installations still in operation today.
CBP’s Coal Fired Power Plant Products

- Bottom Ash Systems
- Economizer / Fly Ash Systems
- P.F. Systems
- Coal Handling Systems
Bottom Ash Systems

- Discharge Pipework and Fittings
- Combining Tubes
- Pump Suction Lines
- Expansion Joints
- Hopper Linings
- Drag Chain Conveyor Linings
Economizer / Fly Ash Systems

- Conveying Pipework and Fittings
- Air Separator Tanks
Pulverized Fuel Systems

- Mill Crossover Pipework
- Classifier Cones
- Turret Liners
- Exhauster Linings
- Mill to Burner Pipework
- Feed Bunker Linings
- Burner Linings
- Mill Dampers
- Riffles / Splitters
Coal Handling Systems

• Bunker Linings
• Chute Linings
• On Site Installations
Basramite (Cast Basalt) tile lined coal bunker.

Basramite (Cast Basalt) tile lined chute.
